Deploying Personality Trait Model:

In this version, we have introduced the functionality to predict all three models namely; SVS, HVP and OCEAN models. The steps to fetch the latest is as follows

Step 1: Create an EC2 instance

Step 2: Docker image

1. If the existing container is running, first stop the container by running:
   docker stop personality_trait
   docker rm personality_trait
2. Pull the docker image from docker hub from
   https://hub.docker.com/repository/docker/jabirai096/personality_trait using:
   docker pull jabirai096/personality_trait:latest
3. Run the container:
   docker run -d --network host --name personality_trait
   jabirai096/personality_trait:latest

Step 3: Use postman or curl to test

1. You can use either postman or curl to test.
   a. Route: /predict
   b. Port: 5000
   c. Headers:
      i. Content-Type: application/json
   d. Body:
      ```
      {
          "text": "This is the sample test",
          "model": "ocean"
      }
      ```
   e. Response:
      i. Json of HVP, SVS or OCEAN values based on the model selection

Example:
