Deploying Personality Trait Model:

In this version, we have introduced the functionality to predict both SVS and HVP parameters using the updated docker image.

Step 1: Create an EC2 instance

Step 2: Docker image

1. Pull the docker image from docker hub from
   https://hub.docker.com/repository/docker/jabirai096/personality_trait using:
   a. docker pull jabirai096/personality_trait:latest
2. Run the container:
   a. docker run -d -p 5000:5000 --name personality_trait
   jabirai096/personality_trait:latest

Step 3: Use postman or curl to test

1. You can use either postman or curl to test.
   a. Route: /predict
   b. Headers:
      i. Content-Type: application/json
   c. Body:
      ```
      {
              "text": "This is the sample test",
              "model": "svs"
      }
      ```
   d. Response:
      i. Json of HVP or SVS values based on the model selection
